2) Vision and Mission

Our Mission

To develop and manufacture effective, reliable products that support farmers' success and the agricultural sector—through modern manufacturing, controlled quality, and flexible service that meets market needs.

Our Vision

For “Maaden” to be one of the most specialized and distinguished companies in the field of pesticides and fertilizers, with a competitive presence in regional and global markets.

3) Areas of Specialization and Products

MAADEN
مصنع معادن لإنتاج المبيدات والأسمدة
MAADEN FACTORY FOR PESTICIDES & FERTILIZERS

The company provides solutions through main pillars:

Herbicides to control weeds and increase field productivity

Fungicides to reduce fungal diseases and improve crop quality

Insecticides to protect crops from a wide range of pests

Public health pesticides

Nematicides

Miticides (mite/spider control)

The company has a catalog that includes 50+ products across multiple categories.

Fertilizers and soil conditioners to increase soil fertility and improve nutrient uptake

4) Manufacturing Capabilities and Operational Excellence

Maaden's production process is based on:

- Applying modern technology and international standards in manufacturing
- Producing formulations tailored to regional and international market needs
- Operational commitment to on-time delivery while maintaining quality

5) Quality and Process Control

The company focuses on quality control from the beginning of manufacturing to the final product. This includes (according to your internal regulatory documents):

Developing an internal physical and chemical testing system by separating and equipping laboratories

Strengthening biological testing and toxicity studies in cooperation with a specialized academic entity (according to the agreement mentioned in your document)

Performing tests during manufacturing and after the final product is completed to ensure consistent quality and effectiveness

6) Safety, Environment, and Sustainability

As part of the company's environmental responsibility and reducing impact, work has been done on:

Allocating a designated area/tanks to collect liquid production waste

Managing waste disposal in coordination with the relevant environmental authorities (as stated in your file)

Improving the storage environment by installing warehouse racks and organizing raw materials and finished products to support safety and quality

7) Target Markets and Export

The company serves the local market and is working on international expansion. Website information indicates exports to: Algeria, Egypt, Iraq, Lebanon, Palestine, Yemen.
